This atlas features population density maps at the Census Block level for each county in New York State. Each county map uses one of three color schemes based on its population density:

> red – low density,
> green – moderate density
> purple – high density (only counties in New York City use purple)

The symbols for cities and villages are the same across each map category denoted below.

There are no population limits for cities or villages in New York State – cities do not necessarily have a higher population or are denser than villages. For example, **Hempstead village** in Nassau County has a population of nearly 60,000, greater than many smaller cities in upstate New York.
